## ALUMINUM FOCUS

In Issue 1, we briefly talked about our aluminum windows. In this edition of our monthly newsletter, we want to go in-depth on how our aluminum offerings can benefit your upcoming project.

All of our aluminum windows are thermally broken, which means there is an insulated barrier within the frame that helps control the flow of outdoor noise and temperature. Not only does this feature allow for traffic and other external noise to be blocked, but it will also help lower heating and cooling costs in the long-term. Future tenants will thank you!

We hope you enjoy learning more about our aluminum window product line. If you are interested in a quote, please visit our website or email [estimating@ecowds.com](mailto:estimating@ecowds.com) with your project details.
